**LEAD TIME TECHNOLOGY CELEBRATES ITS TENTH ANNIVERSARY**

*Provider of Operations Process Consulting and Decision Support Tools to Optimize Supply Chain Performance Is Committed to Operations Excellence*

WILMINGTON, DE – June 30, 2008 – Lead Time Technology (LTT), a market leading provider of inventory and business process optimization tools, today announced it has successfully completed its tenth year providing operations process consulting and decision support tools enabling customers to achieve unprecedented supply chain and manufacturing operations performance improvements.

During the nineties, four DuPont engineers developed patented statistical forecasting and inventory planning algorithms improving DuPont's responsiveness to customer demand. The models account for most operating variables, supply and demand lead times and their distribution. LeadTime Technology™ base technology was implemented at several DuPont businesses as well as select customers.

With the encouragement of DuPont, they founded Shipman Enterprises in mid-1998. The company's mission provides practical integrated process consulting and decision support tools that simultaneously optimize decisions across the supply chain supported by unique technology providing visibility and the most profitable process control to "end-to-end" material flow.

In 2004, Shipman Enterprises became Lead Time Technology to better represent the value it brings to market. LTT has also released its Fast>>Forward product providing optimization to the SMB market and Jewelry-TRAK, designed for jewelry manufacturers and distributors.

This year, LTT added industry veteran, Rich Sherman, president, Gold & Domas Research to its board of directors, announced a development/sales partnership with ColdCypress, Pittsburgh, PA, and, was accepted to Microsoft's High Potential Partner Program.

“It’s been an exciting ten years,” said Mike Bonelli, President of Lead Time Technology. “We’ve helped many companies improve their operations, reduced costs by hundreds of millions dollars, and enabled operators to make the most profitable decisions for their companies. We celebrate this tenth anniversary while looking forward to an even more exciting decade ahead.”

**About Lead Time Technology, Inc.**

Founded in 1998, Lead Time Technology is a market leading provider of process consulting and decision support tools to integrate daily operations planning, scheduling, and inventory optimization across the supply chain. Using patented models and consulting services, LTT’s decision support solutions transform resources into competitive advantage. LTT’s unique combination of consulting and software enables operational decisions to be clearly correlated to financial measurements ensuring rapid ROI and increased shareholder value.
